

1.1.4 Area of Triangle

Algorithm:

Step 1: Start the program.

Step 2: Input the base of the triangle.

Step 3: Input the height of the triangle.

Step 4: Calculate area using formula: $\text{Area} = (\text{Base} \times \text{Height}) / 2$

Step 5: Display the area of the triangle.

Step 6: Stop the program

1.1.4. Area of Triangle04:13

Write a Python program that prompts the user to enter the triangle's base and height and computes the triangle's area.

Formula: $Area\ of\ Triangle = 0.5 \times base \times height$.

Input Format:

- The first line of input is the float value that represents the base of the triangle.
- The second line of input is the float value that represents the height of the triangle.

Output Format:

- The output is the floating point value that represents the area of a triangle, formatted to two decimals.

Sample Test Cases

triangleA...

```
1 b = float(input())
2 h = float(input())
3 a=0.5*b*h
4 print(f"{a:.2f}")
```

Average time0.004 s3.75 ms

Maximum time0.005 s5.00 ms

2 out of 2 shown test case(s) passed
2 out of 2 hidden test case(s) passed

Test case 15 ms

Expected output
6.54
1.23
4.02

Actual output
6.54
1.23
4.02

Test case 24 ms
